

What is the reason Python is the first choice for machine learning?

Programming Assignment

Python is a programming language, which has a wide range of applications. It is primarily used for creating a massive range of applications.

Reasons behind using Python for Machine Learning-

- **Libraries and Frameworks**
- **Degree of Simplicity**
- **Online support**
- **Flexible Integrations**
- **Fast Code Tests**
- **Development**

Conclusion

Python programming language is important for better creating machine learning models. It is easy to understand and enables quicker prototyping, product testing means, and the promotion of the general-purpose language. Thus, it is highly crucial for machine learning.

PYTHON
